

MEMORABLE MOMENTS IN TECH

1950s: The rotary phone

1950s: Jeeps were used to deliver US mail

1950: The principles at work in magnetic drum memory helped lead to the hard disk drive.

1950s

1950s movie camera

1953: the first high-speed printer is developed by Remington-Rand for use on the Univac computer.

1964: Douglas Engelbart invents the computer mouse.

1950: The typewriter is 78 years old.

1951: The Uniservo 1 served as an input-output device to replace punched cards on the new Univac 1 computer.

1951: The Heidelberg Tiegel printing press

1961: Fernando Corbatò invents the password at MIT. (A few months later, the first password-based breach occurs.)

1960s

1962: The first touch tone phone, by AT&T.

1970s

1971: the first email is sent by Ray Tomlinson.

1967: The ATM and pin codes

1974: MITS develops the first personal computer, the Altair, using Intel's 8080 microprocessor.

1972: the cassette tape is available for data storage.

1976: Shugart Associates introduces the 5 1/4-inch Floppy Disc.

1980s

1981: The Osborne 1 is the first commercially successful portable microcomputer, released by Osborne Computer Corporation. It weighs 10.7 kg, costs US\$1,795.

1973: the first cellular phone was invented by Martin Cooper of Motorola - the shoebox-sized DynaTAC.

1977: named after the Pet Rock in Los Gatos, they were going to make the "pet computer." It was backronymed to Personal Electronic Transactor.

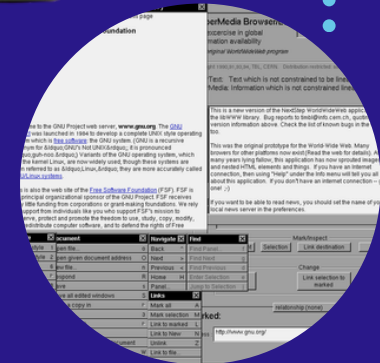

1975: The IBM 5100 is recognized as the first portable computer

1985: The CD-Rom for data storage is standardized by Philips and Sony Corps. But James Russel invented the technology in 1965.

1984: Apple releases the Macintosh

1990: Tim Berners Lee sets the stage with the first Web Browser - "The World Wide Web."

1990s

1992: Neil Papworth sends the first ever text message to his colleague Richard Jarvis.

1995: Amazon and eBay redefine the online shopping experience

1990s

1991: America Online is launched

1995: The DVD becomes the standard for storage

1998: Google is founded - from brand to VERB - known as the act of finding anything online.

2000s

2000: The first flash drive or "thumb drive" hits the market.

1999: The Apple AirPort shows later inventors the way to WiFi.

2005: Youtube takes the stage

2005: Mark Zuckerberg and pals start "The Facebook" - and a new social era.

2000s

Still searching for simpler, more secure alternatives to that pesky password.

2006: Amazon makes "virtual computers" accessible via EC2.

2010s

2009: Bitcoin - changing the way we look at investment

2008: SMS Sugar Man is shot entirely on a Sony Ericsson W900i mobile phone.

2016: SpaceX Falcon 9 Reusable Rocket lands

TraitWare's patented technology combines MFA + SSO - eliminating the need for the username and password for login

TRAITWARE®

2020: All via the device, wearable tech... and everything in the cloud.

2019: Virtual Surgery is iused in medical traitting.

2020
